

SOLAR
LASER SYSTEMS LTD.

AccuCut[®]

Solar Laser Systems is the UK distributor for Accucut die cutting machines and dies.

These are durable, commercial quality machines that give excellent performance over many years of hard use. The design allows you to see clearly how the cutting is being achieved and the guards around the roller prevent fingers being trapped.

These machines will cut paper and card, textiles, rubber, leather and soft plastics. They are ideal for craft and educational use as well as commercial and industrial use.

Accucut manufacture a wide range of stock dies for use in their machines. Details can be found on the Accucut website with prices in US\$.

www.accucut.com

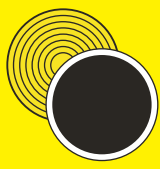

Prices in the UK will include import duty, shipping and delivery costs and VAT.

Custom dies can be produced to order.

AccuCut[®]

MARK IV

The award-winning, patented roller design of the AccuCut MARK IV Roller Die Cutting Machine makes die cutting practically effortless. Roller pressure is preset, so each handle turn is as easy as the first. Simply turn the handle and roll through as many as five dies in a single pass. The 12" wide cutting area accommodates all sizes of AccuCut dies except big, giant, super giant and super long cut.

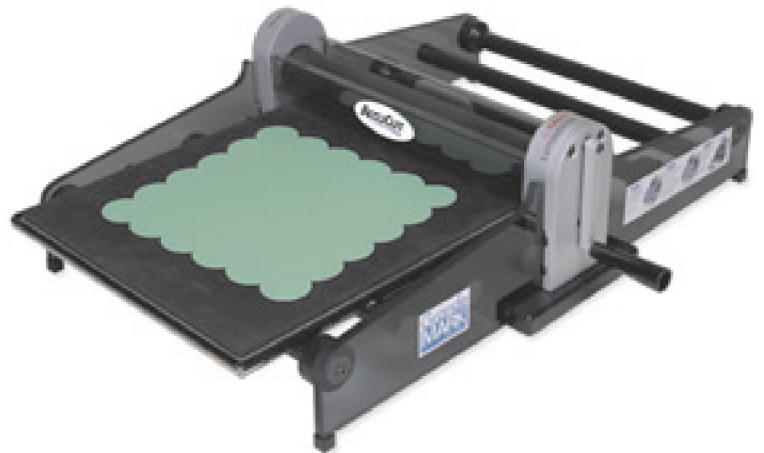

MARK III

A perfect match for limited budgets or as an additional machine in a busy die cutting centre, the AccuCut MARK III Roller Die Cutting Machine will cut all mini, small, large and long cut dies. Optional tray available for extra long cut dies. Simply turn the handle and roll through as many as two dies in a single pass. The cutting area is 6½" wide

GrandeMARK

Specially designed for craft retailers and professional designers, the GrandeMARK cuts precise shapes of all sizes for scrapbook pages, handmade cards, stationery, fabric crafts and more. With a 16" wide cutting area, it's the only AccuCut machine that holds giant, super giant and super long cut dies. Steel roller never needs replacing, and dies cut into reusable sheets of cutting plastic.

Baby GrandeMARK

This "junior" version of the GrandeMARK machine uses the same technology—steel roller and cutting plastic. It is smaller, with a 13" wide cutting area, so it takes up less counter space. Use for exact cuts like those required for stationery and fabric crafts. Tray accommodates all sizes of AccuCut dies except big, giant, super giant and super long cut.
